CricIQ — Assignment Submission

PROTOTYPE SUBMISSION

AI-Powered Live Match Companion & Fantasy Intelligence | Second-Screen Assistant

1. WORKING ARTIFACT & LIVE PROTOTYPE LINK

Live Prototype:	https://criq-for-dream-11.vercel.app/	**Status:** Active & Live
Access & Auth:	Zero setup / keyless evaluator access. Powered by serverless proxy with protected API keys.	**Tech Stack:** HTML5, CSS3, JS, Vercel

2. SHORT NOTE: PROBLEM, SOLUTION & AI TOOLS (172 WORDS)

Fan Problem

Cricket fans face severe cognitive overload during live T20 matches: missing game-changing moments (DRS reviews, dropped catches), struggling to decipher complex match rules (DLS calculations, umpire's call, powerplay restrictions), and failing to evaluate live Dream11 fantasy point swings from static scorecards.

How CricIQ Helps

CricIQ serves as an intelligent second-screen companion transforming raw feeds into contextual understanding:
• **Grounded AI Insights:** Explains key moments in plain English (*'What Happened?'*), catches up late joiners in seconds (*'Catch Me Up'*), and answers ad-hoc queries (*'Ask Anything'*).
• **Fantasy & Rules Grounding:** Real-time match data is strictly grounded with the Dream11 scoring matrix (batting/bowling/fielding bonus points) and cricket rulebooks to deliver clear captaincy guidance and momentum shifts.
• **Interactive Simulation:** Dynamic ball-by-ball timeline, live commentary, and multi-match coverage (live, upcoming, completed, and interactive demo).

AI Tools Used

• **Google Gemini 3.1 Flash Lite:** Primary high-throughput inference engine for real-time explanations, summaries, and Q&A.;
• **Groq (openai/gpt-oss-120b):** Automatic ultra-low-latency fallback if Gemini hits rate limits.
• **Vercel Serverless Architecture:** Secure server-side proxy guaranteeing zero client credential exposure.

3. PRODUCT CAPABILITIES & VALUE-ADD ARCHITECTURE

Feature / Capability	Implementation Details & User Experience	Dream11 Value & Strategic Fit
Instant Moment Breakdown 'What Happened?'	Synthesizes recent deliveries into plain narrative, demystifying DRS ball-tracking, LBW impact, and dismissals.	Immediate clarity on bowling bonuses, wicket points, and maiden overs.
Contextual Match Catch-Up 'Catch Me Up'	Provides late-joining users an immediate tactical summary: phase run rates, standout performers, and momentum shifts.	Empowers users to track their chosen XI's trajectory and evaluate captaincy choices.
Rules & Fantasy Engine 'Ask Anything'	Grounded Q&A; using official ICC/IPL playing conditions (DLS, Super Over, powerplays) and real-time match context.	Answers complex fantasy scoring queries (strike-rate penalties, boundary milestones).
Dual-Provider Architecture Production Resilience	Redundant LLM pipeline with automated failover (Gemini → Groq) ensuring high availability without timeouts.	Enterprise security posture: zero API keys exposed in browser bundle.
